

# Get Clean.

**Touchless Oras Electra.  
Hygienic, easy to use and keep clean.**

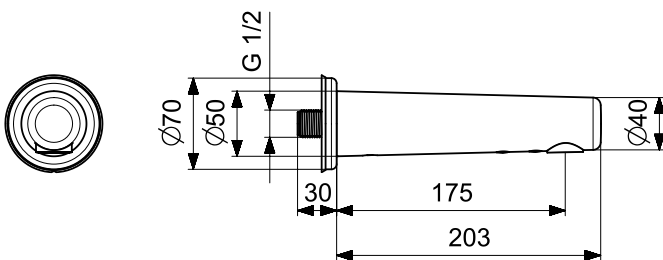

# Oras Electra. Touchless washbasin faucet for cold or pre-mixed water.

- **Hygienic**
- **Laminar flow**
- **Easy to keep clean**
- **Saves on water and energy**

Oras Electra touchless washbasin faucets are hygienic, as hands can be washed without touching the faucet. There are no extra seams because all components are inside the spout. Laminar flow (no air mixed in the water flow) reduces the risk of spreading microbes. Water is flowing only when hands are under the faucet, this saves on water and energy. There is an integrated shut-off valve, which enables the spout to be removed without the inner body. Oras Electra is battery-operated (2 x AA lithium batteries 1.5 V) and battery lifetime is approximately 3 years.

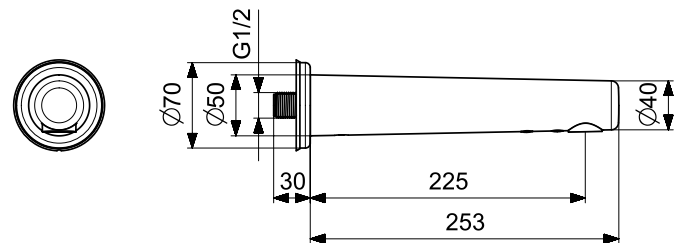

The touchless washbasin faucet is especially for use in public facilities. As the faucet responds to movement, and so does not have to be "operated", it is user-friendly, safe, and hygienic. Further the water is only ever supplied in the actual quantity and temperature required, no resources are wasted. You save on water and energy every time the faucet is used.

6188

Touchless washbasin faucet for cold or pre-mixed water. Battery-operated 3 V. Spout length 175 mm. Laminar flow. The faucet is equipped with a litter filter, non-return valve, shut-off valve and G 1/2" external connection thread.

6189

Touchless washbasin faucet for cold or pre-mixed water. Battery-operated 3 V. Spout length 225 mm. Laminar flow. The faucet is equipped with a litter filter, non-return valve, shut-off valve and G 1/2" external connection thread.
